Greened Architecture

Façade greening Rood greening Interior greening

CRADLE Buch – Chris van Uffelen

Greened Architecture explores the integration of vegetation into the built environment as a key strategy for more sustainable and climate-responsive cities. Featuring green roofs, living façades, and interior greening systems, this approach shows how buildings can be transformed into dynamic, living environments.

Supported by more than 550 photographs, drawings, and plans, the volume presents 52 international projects ranging from family homes to large office buildings that successfully implement greening strategies in diverse urban contexts..

Nonfiction book with essays

CRADLE Books

The new series of CRADLE books is published in collaboration with CRADLE magazine. These single-theme volumes present exemplary projects with detailed descriptions, extensive facts, and detailed and overview plans and images. This highlights both the technical diversity and the design integration of the respective approaches..
